

```

public class 左左左 {
    public static void main (String[] args) {
        int password = 751248;
        int key = 7;
        System.out.println("原密码" + password);
        password = password < key;
        System.out.println("左左运算加密后" + password);
        password = password > key;
        System.out.println("左左运算加密后" + password);
    }
}

```

```

public class 虎 {
    public static void main (String[] args) {
        int tiger a = 100;
        int tiger b = 200;
        boolean b = tiger a = tiger b ? true : false;
        System.out.println("b;" + b);
    }
}

```
