```java
public class Weight {
    public static void main(String[] args) {
        double height = 1.72f;
        int weight = 60;
        double BMI = weight/(height + weight);
        System.out.println("height:" + 60);
        System.out.println("height:" + 1.72);
        System.out.println("BMI: " + BMI);
        System.out.println("height:");
        if(BMI <= 18.5) {
            System.out.println("weight is轻");
        }
        if(BMI > 18.5 && BMI <= 24.9) {
            System.out.println("weight正常");
        }
        if(BMI > 24.9 && BMI <= 29.9) {
            System.out.println("weight过重");
        }
        if(BMI >= 29.9) {
            System.out.println("weight is RE严重");
        }
    }
}
```
